Hopefully there are enough 1969 / 1970 Mustang owners that I can get some help on this. This is for a 1969 no-AC Mustang. The power wire for the blower motor runs through the firewall (through "Hole A", pic 1). As you can see in my pics there is no grommet in the hole (pic 1) or on the wire (orange wire, pic 2).

### **Help on 1969 blower wire (non A/C) | Vintage Mustang Forums**

Look for 12 volts at the brown wire on the blower motor with the ignition switch in Run and the selector switch is in some position other than off. No 12 volts: then the fuse, the wiring that feeds the selector switch or the selector switch is bad. Good 12 volts, then ground the other side of the motor: if the motor is good it will run.
