Interpret the Graphed Function Step-by-step Lesson - You will learn to identify linear, exponential, and quadratic functions by the shape trend of their graphs. Guided Lesson - In addition to interpreting graphs, you will need to make them here first.

Comparing Linear and Exponential Functions Worksheets

Linear, Quadratic, & Exponential Models: Construct and compare linear, quadratic, and exponential models and solve problems. Construct linear and exponential functions, including arithmetic and geometric sequences, given a graph, a description of a relationship, or two input-output pairs (include reading these from a table).

When plotted on x-y coordinates, a linear function will be a straight line. Exponential Function: An equation where the independent variables are exponents. An example of an exponential function with one independent variable is: $y = a^x$ Does the table represent a linear or an exponential function? X - 1, 2, 3, 4

3 Exponential and logarithmic functions 3.1 Introduction to exponential functions An exponential function is a function of the form $f(x) = bx$ where b is a fixed positive number. The constant b is called the base of the exponent. For example, $f(x) = 2x$ is an exponential function with base 2.
