Metrological | Define Metrological at Dictionary.com

A unit of measurement is a standardised quantity of a physical property, used as a factor to express occurring quantities of that property. Units of measurement were among the earliest tools invented by humans. Primitive societies needed rudimentary measures for many tasks: constructing dwellings of an appropriate size and shape, fashioning clothing, or bartering food or raw materials.

Unit of measurement - Wikipedia

Egypt: The Weights and Measures of Ancient Egypt. Land and other larger measurements took several forms. The length of the double remen was equal to that of the diagonal of a square with each side measuring one royal cubit.

The Weights and Measures of Ancient Egypt

This part provides a summary of most of the units of measurement to be found in use around the world today (and a few of historical interest), and the conversion factors needed to change them into a 'standard' unit of the SI.

cable, cable machine an exercise machine in which the lifter pulls on a handle attached to a cable. The main difference between an exercise in which the resistance is transmitted through a cable rather than being done with free weights is that the force is in the direction of the cable rather than always pointing downwards. For example, when using a cable machine to perform curls, the cable ...

The use of metric prefixes dates back to the inception of the French metric system, in 1793. It was originally decided that the submultiples of all basic units would be prefixed with a Latin root, corresponding to the decimal divisor (deci for 10, centi for 100, milli for 1000), whereas the decimal multiples would be prefixed with a Greek root, corresponding to the decimal multiplier (deca for ...
