CHM 3120, the lecture portion of Introduction to Analytical Chemistry, consists of two one-hour lectures per week. CHM 3120L, the companion laboratory course, includes two three-hour laboratory meetings per week. The lecture portion of this course is divided into four approximately equal parts: 1. statistics and stoichiometry; 2.

Course Description. These methods are used in the separation, identification and quantification of the chemical components of natural and artificial materials. Using a combination of problem-based learning approaches, case studies and traditional lectures, the student will develop critical thinking skills in the areas of instrument selection,...

Concentration units. • A one molecular solution contains 1 mole of a material solved in one liter of solvent (e.g. water). The unit is mole per liter. • Example: A one molecular saline solution contains 58,44 g common salt NaCl solved in one liter water.
