The American Petroleum Institute gravity, or API gravity, is a measure of how heavy or light a petroleum liquid is compared to water: if its API gravity is greater than 10, it is lighter and floats on water; if less than 10, it is heavier and sinks.. API gravity is thus an inverse measure of a petroleum liquid's density relative to that of water (also known as specific gravity).

The original technique used to measure the gravity of liquids was called the Baumé scale. It was developed in France in 1768 and officially accepted by the U.S. National Bureau of Standards in 1916. After encountering a series of errors and variations the American Petroleum Institute refined the scale and created API gravity.
