Buddhism includes an analysis of human psychology, emotion, cognition, behavior and motivation along with therapeutic practices. A unique feature of Buddhist psychology is that it is embedded within the greater Buddhist ethical and philosophical system, and its psychological terminology is colored by ethical overtones. Buddhist psychology has two therapeutic goals: the healthy and virtuous ...

With the dawning of the twenty-first century there arose another new approach to psychology, known as Positive psychology. Originally a development of humanistic psychologists' research on happiness and their focus on treating mental health rather than mental illness it is intended to complement, not to replace, traditional psychology. Positive psychology brought an emphasis on the importance ...

The cross-race effect (sometimes called cross-race bias, other-race bias or own-race bias) is the tendency to more easily recognize faces of the race that one is most familiar with (which is most often one's own race). A study was made which examined 271 real court cases. In photographic line-ups, 231 witnesses participated in cross-race versus same-race identification.

1.. The norm of conditional cooperationIn this article, we review evidence to suggest that human cooperation is largely based on a social norm of conditional cooperation. This norm prescribes cooperation if the other group members also cooperate, whereas the defection of others is a legitimate excuse for individual defection.
