

## *Biochar For Environmental Management Science Technology And Implementation*

### **Biochar For Environmental Management Science**

Biochar is a stable carbon-rich by-product synthesized through pyrolysis/carbonization of plant- and animal-based biomass. An increasing interest in the beneficial application of biochar has opened up multidisciplinary areas for science and engineering.

About us. text IBI provides a platform for fostering stakeholder collaboration, good industry practices, and environmental and ethical standards to support biochar systems that are safe and economically viable One billion tons of biochar produced per year within 50 years.

### **International Biochar Initiative**

Biochar is charcoal used as a soil amendment. Biochar is a stable solid, rich in carbon, and can endure in soil for thousands of years. Like most charcoal, biochar is made from biomass via pyrolysis. Biochar is under investigation as an approach to carbon sequestration, as it has the potential to help mitigate climate change. It results in processes related to pyrogenic carbon capture and ...

### **Biochar - Wikipedia**

Biochar composition can be crudely divided into relatively recalcitrant C, labile or leachable C and ash. The greatest chemical difference between biochar and other organic matter is the much larger proportion of aromatic C and, specifically, the occurrence of fused aromatic C structures (), in contrast to other aromatic structures of soil organic matter such as lignin (Schmidt and Noack, 2000).

### **Biochar effects on soil biota - A review - ScienceDirect**

Biochar. Project Drawdown defines biochar as: a biosequestration process for converting biomass to long-lived charcoal (and energy) which can be used as a soil amendment. This solution provides an alternative to disposing of unused biomass through burning or decomposition. Biochar is a carbon-rich, highly stable charcoal soil amendment produced as a byproduct of pyrolysis, a bioenergy ...

Ever heard of biochar? For most home gardeners, chances are that it's a brand new term. In short, biochar is a charcoal compound added to soil that makes it more fertile. Biochar has a long and complex history of use in indigenous farming throughout West Africa and the Amazon rainforest where the incredible results can [...]

Le biochar est un amendement agricole issu de la pyrolyse de biomasse. Son utilisation présente de nombreux avantages, parmi lesquels la réhumification des sols, l'amélioration de la rétention d'eau et la stimulation du système immunitaire des plantes. Il en résulte une augmentation significative de la productivité des sols.

Environmental Impact. According to the EPA, agricultural soil management practices can lead to production and emission of nitrous oxide (N<sub>2</sub>O), a major greenhouse gas and air pollutant. Activities that can contribute to N<sub>2</sub>O emissions include fertilizer usage, irrigation and tillage. The management of soils accounts for over half of the emissions from the Agriculture sector.

Abstract. In recent years, agricultural growth in China has accelerated remarkably, but most of this growth has been driven by increased yield per unit area rather than by expansion of the cultivated area.
