Car Park Designers' Handbook

Parking Layouts. Parking layouts are strategies for efficiently organizing multiple indoor or outdoor parking spaces. Often laid out in parking lots or designed as multi-level parking structures, parking facilities are essential for systematically storing vehicles in public and private settings. Parking parameters differ between countries and governments and each has developed their own standards.

Chapter 5 Parking Lot Design - APAI

Parking Structures: Recommended Practice For Design and Construction 1-1 Parking structures have become important elements in today's urban and suburban environments.

Recommended Practice for Design and Construction

the design of a new facility can never be prescriptive - multi-storey developments in a city centre will have different security requirements from a rural surface level car park. there isn't a one-fits-all design for a safer car park. what we can provide is best practice guidance to designers, owners and operators on the design and incorporation of physical security features that will establish and maintain a safe and non-threatening parking environment.

Parking Standards Design and Good Practice

Parking lot design involves many considerations. All too often the only consideration for the design is developing a sufficient parking area to meet the required number of vehicles based on adjacent occupancy. Local regulations will dictate many of the planning and design decisions made by the planner or designer.

14.2 PARKING DESIGN CONSIDERATIONS Aesthetically pleasing and functional parking areas that fulfill the needs and requirements of the users should be the primary goal of the designer. A well-defined design process will greatly increase the probability of creating parking areas that satisfy this goal.

14.2 PARKING DESIGN CONSIDERATIONS
