Homocysteine is an amino acid that is typically present in very small amounts in all cells of the body. That is because the body normally converts homocysteine into other products quickly. Since vitamins B6, B12, and folate are necessary to metabolize homocysteine, increased levels of the amino acid may be a sign of deficiency in those vitamins.

Respiratory System Oxygen is the basic method for improving the function of lungs. When the lungs do not function properly because they cannot transmit the oxygen across the lung to the blood, or internal temporary (asthma) or permanent (emphysema) changes make the lungs work inefficiently, adding oxygen may often overcome the defect.
