Catheter Ablation Of Cardiac Arrhythmias

Cardiac ablation is a medical procedure for treating arrhythmia, irregular heartbeat, and atrial fibrillation (AFib). Learn more about the types of ablation, the procedures, possible risks and ...

Cardiac Ablation (Catheter and Surgical): Procedure, Risks ...

In some cases, cardiac ablation prevents abnormal electrical signals from entering your heart and, thus, stops the arrhythmia. Cardiac ablation usually uses long, flexible tubes (catheters)

inserted through a vein or artery in your groin and threaded to your heart to deliver energy in the form of heat or extreme cold to modify the tissues in your heart that cause an arrhythmia.

Cardiac ablation - Mayo Clinic - Mayo Clinic

Catheter ablation is a treatment for cardiac arrhythmias. During ablation, a doctor inserts a catheter (thin, flexible tube) into the heart. A special machine delivers energy through the catheter to tiny areas of the heart muscle that cause the abnormal heart rhythm.

Catheter Ablation: Treatment, Risks, Benefits, Outlook

The complications of catheter ablation are related to the target arrhythmia, the anatomy of the heart and vessels that are entered or traversed, the energy source used for ablation, and the size and number of catheters used.

Whether you are in the lab or the office, stay current in the ever-evolving field of electrophysiology with Catheter Ablation of Cardiac Arrhythmias. Organized by type of arrhythmia, this simple yet comprehensive medical reference book provides detailed information on anatomy, diagnoses, mapping/ablation, and troubleshooting. The book also extensively covers the updated, basic concepts of ...

Catheter Ablation of Cardiac Arrhythmias - 3rd Edition

The findings on complications of RF ablation from the prospective multicenter study by Calkins et al are not very different from those found in the earlier Multicenter European Radiofrequency Survey reported by Hindricks. 12 In that retrospective study, in which 2222 patients with accessory APs were treated by catheter ablation in the years 1987 to 1992, 14 patients (0.63%) developed complete ...

Catheter Ablation of Cardiac Arrhythmias - 4th Edition

Catheter ablation is a specialist catheter-based procedure that removes (ablates) abnormal heart muscle tissue, and can eliminate dangerous cardiac arrhythmias. The procedure is used particularly in patients whose cardiac arrhythmia cannot be controlled with medication.

Catheter ablation treatment for cardiac arrhythmias ...

Catheter ablation is a way to treat heart irregular heartbeats, or arrhythmias, like atrial fibrillation (AFib), atrial flutter, or supraventricular tachycardia (SVT). It destroys the tissue that ...

Catheter Ablation of Cardiac Arrhythmias: Huang MD, Shoei ...

Catheter ablation is used to treat abnormal heart rhythms (arrhythmias) when medicines are not tolerated or effective. Medicines help to control the abnormal heart tissue that causes arrhythmias. Catheter ablation destroys the tissue. Catheter ablation is a low-risk procedure that is successful in most people who have it.

...

Introduction. Transvenous catheter ablation of cardiac arrhythmias was first described in the 1980s. 1, 2 In 1998, Haïssaguerre et al. 3 introduced catheter ablation as a treatment option for atrial fibrillation (AF), which today is the dominating procedure in the majority of institutions. Over the past decades, the procedural techniques have gradually evolved and catheter ablation is ...

decade of catheter ablation of cardiac arrhythmias in ...

While for many types of cardiac arrhythmias catheter ablation is a highly efficacious and safe ablation procedure, with little room for further improvement (atrial flutter, accessory pathways, the AV node, premature ventricular contractions (PVCs)), the outcomes of catheter ablation for more complex arrhythmias are modest.

Cardiac Arrhythmias With Catheter Ablation - radcliffe ...

Aims: Catheter ablation is considered the treatment of choice for many tachyarrhythmias, but convincing 'real-world' data on efficacy and safety are lacking. Using Swedish national registry data, the ablation spectrum, procedural characteristics, as well as ablation efficacy and reported adverse events are reported.

A decade of catheter ablation of cardiac arrhythmias in ...

Nonpharmacologic therapy for symptomatic and life-threatening cardiac arrhythmias includes the use of catheter ablation, the implantable cardioverter-defibrillator for ventricular arrhythmias, and, at times, cardiac surgery. The clinical role of catheter ablation in the treatment of arrhythmias will be reviewed here.

Catheter ablation is a procedure used to remove or terminate a faulty electrical pathway from sections of the hearts of those who are prone to developing cardiac arrhythmias such as atrial fibrillation, atrial flutter, supraventricular tachycardias (SVT) and Wolff-Parkinson-White syndrome (WPW syndrome). If not controlled, such arrhythmias increase the risk of ventricular fibrillation and ...
