Chapter 12 Molecular Genetics Study

As you learned in Chapter 1, molecular anthropologists use genetics to compare ancient and modern populations as well as study nonhuman primates. Molecular anthropologists must also stay current with advancing technology (you will learn about the results of some of this genomic research as it has been applied to fossils in Chapters 11 and 12).

Molecular Biology and Genetics - Explorations

In transmission genetics, organisms are crossed to study the inheritance pattern in offspring. Cytological techniques help in understanding cellular reproduction. With the advancement of molecular biology and its tools and techniques, geneticists are able to understand the genetic basis of the inheritance of traits and variations present in ...

V.N. Uversky, in Brenner's Encyclopedia of Genetics (Second Edition), 2013
Chemical Extension of the Genetic Code. Protein synthesis occurs during a process called "translation". Posttranslational modification (PTM) of proteins, being one of the later stages in protein biosynthesis, refers to the reversible or irreversible chemical changes proteins may undergo after translation.
