Chapter 2: Introduction to the Chemistry of Life. The elements carbon, hydrogen, nitrogen, oxygen, sulfur, and phosphorus are the key building blocks of the chemicals found in living things. They form the carbohydrates, nucleic acids, proteins, and lipids (all of which will be defined later in this chapter) that are the fundamental molecular...

Chapter 2 provides an overview of the basic principles of chemistry making up the first hierarchical level of living systems discussed in Chapter 1. The chemistry concepts and terminology can be intimidating to many students because of the diversity of concepts needed to build an understanding of biological molecules.

2.2 THE UNITS OF MATTER Every type of matter—including all the components of living cells and organisms and all the nonliving materials on which living things depend—is built from very small units. Atoms and molecules (Fig. 2.1) are the smallest particles that retain the chemical characteristics of their type of matter.
