Chapter 5: Probability. 1. $P(A \cup B)$ is the probability of A or B or both 2. $P(A \cup B) = P(A) + P(B) - P(A \text{ and } B)$ 3. $P(A \text{ and } B)$ is the probability of A and B at the same time; on a Venn diagram this is the intersection 4. $P(A \text{ and } B) = P(A) * P(B)$ iff A and B are independent!

11/8/2013 5 + Section 5.1 Randomness, Probability, and Simulation In this section, we learned that... A chance process has outcomes that we cannot predict but have a regular distribution in many distributions.

Chapter 5 Probability: What Are the Chances?

Chapter 5: Normal Probability Distributions 5.2 Normal Distributions: Finding Probabilities If you are given that a random variable X has a normal distribution, finding probabilities corresponds to finding the area between the standard normal curve and the x-axis, using the table of z-scores.

Chapter 5: Probability - Elgin Community College

Chapter 5: Discrete Probability Distributions 158 This is a probability distribution since you have the x value and the probabilities that go with it, all of the probabilities are between zero and one, and the sum of all of the probabilities is one. You can give a probability distribution in table form (as in table #5.1.1) or as a graph.

Chapter 5: Discrete Probability Distributions

PROBABILITY - CHAPTER 5 32. • question ... given that the mean birth weight in NYS in 2000 was 3351 grams, with a standard deviation of 582 grams, what is the probability that an infant will have a birth weight greater in the range 2724 grams (6 pounds) to 3632 grams (8 pounds) ...

PROBABILITY - CHAPTER 5 1 UP TO NOW

5.3 Normal Distributions: Finding Values Now the process from 5:2 will be reversed. Starting with a probability, you will find a corresponding z-score. The same table will be used, but you will search the center of the table to find the probability first, and then determine the z-score that corresponds to that probability.
