Modular arithmetic is a system of arithmetic for integers, which considers the remainder. In modular arithmetic, numbers "wrap around" upon reaching a given fixed quantity (this given quantity is known as the modulus) to leave a remainder. Modular arithmetic is often tied to prime numbers, for instance, in Wilson's theorem, Lucas's theorem, and Hensel's lemma, and generally appears in fields ...

In number theory Fermat's Last Theorem (sometimes called Fermat's conjecture, especially in older texts) states that no three positive integers  $a$ ,  $b$ , and  $c$  satisfy the equation  $a^n + b^n = c^n$  for any integer value of  $n$  greater than 2. The cases  $n = 1$  and  $n = 2$  have been known since antiquity to have an infinite number of solutions.. The proposition was first conjectured by Pierre de Fermat in ...

In mathematics, a field is a set on which addition, subtraction, multiplication, and division are defined, and behave as the corresponding operations on rational and real numbers do. A field is thus a fundamental algebraic structure, which is widely used in algebra, number theory and many other areas of mathematics.. The best known fields are the field of rational numbers, the field of real ...

MAFS.5.NF.1.1 : Add and subtract fractions with unlike denominators (including mixed numbers) by replacing given fractions with equivalent fractions in such a way as to produce an equivalent sum or difference of fractions with like denominators. For example,  $\frac{2}{3} + \frac{5}{4} = \frac{8}{12} + \frac{15}{12} = \frac{23}{12}$ . (In general,  $\frac{a}{b} + \frac{c}{d} = \frac{ad + bc}{bd}$ .)

Obama considers single people making over \$200,000 to be rich. He specifically called for raising taxes on singles making over \$200,000 and couples making \$250,000 every year he's been office. At the end of 2012, there was a compromise in Congress for raising income taxes for those making \$400,000/\$450,000 and above. Why  $\$400,000 + \$400,000$  doesn't equal \$800,000 for a married couple to pay ...
