

## *Cold Formed Steel Design Manual*

### **Cold Formed Steel Design Manual**

Cold-formed steel (CFS) is the common term for steel products shaped by cold-working processes carried out near room temperature, such as rolling, pressing, stamping, bending, etc. Stock bars and sheets of cold-rolled steel (CRS) are commonly used in all areas of manufacturing. The terms are opposed to hot-formed steel and hot-rolled steel.. Cold-formed steel, especially in the form of thin ...

Facility. Oriental Steel LLC is located in Wadi Kabir one of the largest Industrial area in Muscat. Closeness to Port and other major transport facilities is an added advantage. The shop floor has 4,000 square meter area for fabrication with all equipment.

### **Oriental Steel LLC**

Semi-finished billets, blooms, beam blanks and slabs from the continuous casting process are transformed into a variety of construction products by various processes of heating and mechanical working. The resulting products are either used directly in fabrication of steel components, that are subsequently assembled into structures on site, or made into further products for use in construction.

Every part of a building is subject to the effects of outside forces—gravity, wind, earthquakes, and temperature changes, to name a few. Throughout history, people have constructed buildings that have withstood these forces over a long period of time, primarily using rules of thumb derived from their own experiences and those of their predecessors.

The design process encompasses the architectural design, the development of the structural concept, the analysis of the steel structure and the verification of members. Steel solutions are lighter than their concrete equivalents, with the opportunity to provide more column-free flexible floor space, less foundations and a fast, safe construction programme.
