

## *Conservation Biological Control*

### **Conservation Biological Control**

“Conservation Biological Control,” is a strategy that seeks to integrate beneficial insects back into crop systems for natural pest control. This strategy is based upon ongoing research that now demonstrates a link between the conservation of natural habitat and reduced pest problems on farms.

### **Conservation Biological Control - The Xerces Society**

Conservation biological control depends upon naturally occurring enemies of the pests. Conservation biological control system is more adapted to deal with their targets. This is a major advantage over importing natural enemies of the pests, which needs time to adapt to the environment. It is also said that crop protection specialists everywhere ...

### **Conservation Biological Control | ScienceDirect**

This volume is a comprehensive treatment of how the principles of ecology and conservation biology can be used to maximize biological control. Conservation Biological Control presents various means to modify or manipulate the environment to enhance the activities of natural enemies of pests. It establishes a conceptual link between ecology and ...

### **Conservation Biological Control - 1st Edition - Elsevier**

Based on the notion that monocultures and highly simplified farmscapes are associated with pest outbreaks (1), there has been an increased focus on “conservation biological control” [also called “ecological engineering” (2)] within the last decades to minimize economic losses to pests (3, 4), and at the same time avoid the use of pesticides.

### **Conservation biological control: Improving the science ...**

\_\_\_\_ Conservation biological control: from theory to practice 201 1st International Symposium on Biological Control of Arthropods The importance of the right microclimate (usually humidity) for beneficial insects was already noticed over 60 years ago by Taylor (1940), who attributed the scarcity of pest antestia bugs

### **CONSERVATION BIOLOGICAL CONTROL: FROM THEORY TO PRACTICE H ...**

Yet the contribution of insects that prey upon or parasitize crop pests is largely overlooked. Conservation biological control is a science-based pest management strategy that seeks to integrate beneficial insects back into cropping systems for natural pest control, ultimately reducing and in some cases eliminating the need for insecticides.
