Configurations are widely used in Yii when creating new objects or initializing existing objects. Configurations usually include the class name of the object being created, and a list of initial values that should be assigned to the object's properties. Configurations may also include a list of handlers that should be attached to the object's events and/or a list of behaviors that should also ...

Finally, we may want to choose Model sub-classing approach. This approach is the favorite one for the people with heavy software developing background, especially for the engineers with Object Oriented knowledge. In this approach, we choose to inherit Model class and define our own forward pass. Again, here is how the simple neural network that we implemented with previous approaches looks like:
