Gaining insights rapidly from data is critical to being competitive in today's business world. With a modern data warehouse, customers can bring together all their data at any scale into a single source of truth for use cases such as business intelligence and advanced analytics.

### **Simplify modern data warehousing with Azure SQL Data ...**

In computing, the term data warehouse appliance (DWA) was coined by Foster Hinshaw for a computer architecture for data warehouses (DW) specifically marketed for big data analysis and discovery that is simple to use (not a pre-configuration) and high performance for the workload. A DWA includes an integrated set of servers, storage, operating systems, and databases.

### **Data warehouse appliance - Wikipedia**

PostgreSQL (also referred to as Postgres) is an open-source relational database management system (RDBMS) emphasizing extensibility and standards compliance. It can handle workloads ranging from single-machine applications to Web services or data warehousing with many concurrent users. It is the default database for macOS Server, and is also available for Linux, FreeBSD, OpenBSD, and Windows.

### **PostgreSQL - Wikipedia**

Azure Data Explorer (ADX) was announced as generally available on Feb 7th. In short, ADX is a fully managed data analytics service for near real-time analysis on large volumes of data streaming (i.e. log and telemetry data) from such sources as applications, websites, or IoT devices.
