Creating a next generation sustainable campus. The MIT Office of Sustainability (MITOS) was established in 2013 under the Executive Vice President and Treasurer's Office to integrate sustainability across all levels of our campus by engaging the collective brainpower of our students, staff, faculty, alumni, and partners. We have set out to ensure that sustainability is a critical part of MIT ...

Digital electronics or digital (electronic) circuits are electronics that operate on digital signals. In contrast, analog circuits manipulate analog signals whose performance is more subject to manufacturing tolerance, signal attenuation and noise. Digital techniques are helpful because it is a lot easier to get an electronic device to switch into one of a number of known states than to ...

Digital signage is a sub-segment of electronic signage. Digital displays use technologies such as LCD, LED, projection and e-paper to display digital images, video, web pages, weather data, restaurant menus, or text. They can be found in public spaces, transportation systems, museums, stadiums, retail stores, hotels, restaurants and corporate buildings etc., to provide wayfinding, exhibitions ...

Understanding not only the what, but the why, behind the design of a system is critical to creating an exceptional user experience. Defining and adhering to standards is how we create that understanding. Doing so removes the subjectivity and ambiguity that often creates friction and confusion within product teams.

A key issue in this improvement in technology from AM to FM to digital is that the bandwidth requirements do increase fairly dramatically . An AM system needs just the video bandwidth, ie 5 to 10MHz which means that with standard 500MHz.km MM fiber operation over about 100km might be possible if it wasn't for the fiber attenuation.
