Research Research Interests. We are interested in the interactions and conformational changes of proteins in solution and in membranes. We use a combination of biochemical and biophysical tools but try to avoid the worst perils of reductionism (see footnote) by preserving a strong biological interest.

Progesterone. Hormones and the Menstrual Cycle. The ovary and the adrenals are the source of two types of "female" hormones, estrogens and progesterone.

### **Progesterone - Jeremy E. Kaslow, M.D.**

Neural Therapy. Neural Therapy was originally developed in Germany by the Huneke brothers. It involves the injection of Procaine (also known as Novocain), a common local anesthetic, into various but very specific areas.

About Q-Chem. Q-Chem, Inc. brings commercial, academic and government scientists worldwide in pharmaceuticals, materials science, biochemistry and other fields a comprehensive ab initio quantum chemistry program to solve computational problems faster, more accurately and less expensively than they could otherwise.

### **Scientists and Developers of Q-Chem: Software for ...**

In biochemistry, a metabolic pathway is a linked series of chemical reactions occurring within a cell. The reactants, products, and intermediates of an enzymatic reaction are known as metabolites, which are modified by a sequence of chemical reactions catalyzed by enzymes.: 26 In most cases of a metabolic pathway, the product of one enzyme acts as the substrate for the next.

Thomas Jessell is a Professor of Biochemistry and Molecular Biophysics and Neuroscience, and a member of the Neurobiology & Behavior doctoral program at Columbia University. Dr. Jessell received his Ph.D. in neuroscience from Cambridge University, UK, worked as a post-doctoral fellow at Harvard Medical School, and as a Locke Research Fellow of the Royal Society.

Phosphoenolpyruvate (2-phosphoenolpyruvate, PEP) is the ester derived from the enol of pyruvate and phosphate. It exists as an anion. PEP is an important intermediate in biochemistry. It has the highest-energy phosphate bond found ( $-61.9$  kJ/mol) in organisms, and is involved in glycolysis and gluconeogenesis. In plants, it is also involved in the biosynthesis of various aromatic compounds, and ...

What is CaNCURE? CaNCURE was created in 2015 to provide Northeastern University undergrads with experiential training in cancer nanomedicine. Sixty-six trainees have already completed the program so far, and we expect to train another eighty-nine students in the next 5 years. Our co-op students spend 6-months performing hands-on research in a NCI-funded research laboratory.

Phospholipids are an important class of biomolecules. Phospholipids are the fundamental building blocks of cellular membranes and are the major part of surfactant, the film that occupies the air/liquid interfaces in the lung. These molecules consist of a polar or charged head group and a pair of nonpolar fatty acid tails, connected via a glycerol linkage.

The goal of the Graduate Program in Neuroscience is to produce the best neuroscientists possible. The breadth of our faculty allows us to provide interdisciplinary training drawing from a variety of topics, techniques and perspectives, including neuroanatomy, biochemistry, molecular biology, physiology, biophysics, pharmacology, in vivo brain imaging (e.g., fMRI, M-EEG), computational modeling ...
