In mathematics, a set B of elements (vectors) in a vector space V is called a basis, if every element of V may be written in a unique way as a (finite) linear combination of elements of B . The coefficients of this linear combination are referred to as components or coordinates on B of the vector. The elements of a basis are called basis vectors.. Equivalently B is a basis if its elements are ...

Singular Value. There are two types of singular values, one in the context of elliptic integrals, and the other in linear algebra. For a square matrix, the square roots of the eigenvalues of $A A^H$, where A^H is the conjugate transpose, are called singular values (Marcus and Minc 1992, p. 69). The so-called singular value decomposition of a complex matrix is given by
