The Microbiology Coloring

Food microbiology is the study of the microorganisms that inhibit, create, or contaminate food, including the study of microorganisms causing food spoilage, pathogens that may cause disease especially if food is improperly cooked or stored, those used to produce fermented foods such as cheese, yogurt, bread, beer, and wine, and those with other useful roles such as producing probiotics.

Food microbiology - Wikipedia

Microbiology is a subfield of biology that concerns itself with the study of unicellular, multicellular, or acellular microscopic organisms. There are even further subfields of microbiology, which allow specialization in the studies of viruses, fungi and algae, parasites, nematodes, and bacteria.
