Drilling fluid carries the rock excavated by the drill bit up to the surface. Its ability to do so depends on cutting size, shape, and density, and speed of fluid traveling up the well (annular velocity). These considerations are analogous to the ability of a stream to carry sediment; large sand grains in a slow-moving stream settle to the stream bed, while small sand grains in a fast-moving ...

These are companies he may own shares in but he doesn't own the controlling shares in the ones that I recognize. What matters is he must have massive dividends rolling in and unless we boycott massive amounts of products including life saving pharmaceuticals there is no way we can interrupt this man's funding of the destruction of the United States.
