Introducción. La economía, perteneciente a las ciencias sociales, trata de explicar el funcionamiento del sistema económico en sus distintos aspectos, como producción, consumo, dinero, distribución del ingreso, etc. La herramienta más utilizada por los economistas es la construcción de modelos económicos teóricos y matemáticos que describan el comportamiento de los agentes económicos.

Forests are essential for life on earth. Three hundred million people worldwide live in forests and 1.6 billion depend on them for their livelihoods. Forests also provide habitat for a vast array of plants and animals, many of which are still undiscovered. They protect our watersheds. They inspire wonder and provide places for recreation. They supply the oxygen we need to survive.
