The AC0 inverter has been developed for applications such as transpallet trucks, stacker trucks and cleaning machines with traction motors up to 1.2KW (Vbatt=24V) and 1.8KW (Vbatt=36V). This model is available in the standard format, using an encoder, but it's also thought (work in progress) for sensorless control (no shaft encoder is required ...

Traction systems from Siemens are both innovative and well-proven - and they distinguish themselves as a result of the highest degree of reliability but with minimum maintenance costs. Traction converters and motors are the core of the traction system. IGBT power semiconductors with integrated PWM inverters are used as traction converter.

With this hybrid drive, the power comes from a generator that is driven by an internal combustion engine. Energy storage devices are used to recover the braking energy. The power of the energy storage device, e.g. the battery or ultracapacitor, is combined with the traction motor and generator power.
