In order to find out where to place the rear mounting plate, I test mounted the engine on the stand. Once I determined where to install the plate, I welded four long welds on the sides to give it the most strength possible. With the slits in the mounting plate, I can move the arms to adjust for different size engines.

The fix involves pulling the engine back out and repairing the damage. It would have been nice if we had a test stand where we could run the engine first and uncover the fault where it would be easy to repair. Maybe the guys at Summit Racing have been there too because they just released a simple, self-contained engine test stand on wheels.
