Skin effect is the tendency of an alternating electric current (AC) to become distributed within a conductor such that the current density is largest near the surface of the conductor, and decreases with greater depths in the conductor. The electric current flows mainly at the "skin" of the conductor, between the outer surface and a level called the skin depth.

Skin effect - Wikipedia

According to the system of Gaussian units (cgs), the gauss is the unit of magnetic flux density B and the equivalent of Mx/cm², while the oersted is the unit of magnetizing field H. One tesla (T) is equal to 10⁴ gauss, and one ampere (A) per meter is equal to 4π × 10⁻³ oersted.. The units for magnetic flux Φ, which is the integral of magnetic field over an area, are the weber (Wb) in ...

A lei de Faraday-Neumann-Lenz [nota 1], ou lei da indução de Faraday, ou simplesmente, lei da indução eletromagnética, é uma das equações básicas do eletromagnetismo. Ela prevê como um campo magnético interage com um circuito elétrico para produzir uma força eletromotriz — um fenômeno chamado de indução eletromagnética. É a base do funcionamento de transformadores ...

Lei de Faraday-Neumann-Lenz - Wikipédia, a enciclopédia livre

La electricidad (del griego ἤλεκτρον élektron, cuyo significado es 'ámbar') [1] es el conjunto de fenómenos físicos relacionados con la presencia y flujo de cargas eléctricas. Se manifiesta en una gran variedad de fenómenos como los rayos, la electricidad estática, la inducción electromagnética o el flujo de corriente eléctrica.
