The chalk was found to improve from CIRIA Grade Dm to Grade B3 over the length of the piles and was of low to medium density. All the piles were installed by CFA techniques and were 600mm diameter. Their lengths ranged from 8.5 m to 16 m, thus some terminated in structureless chalk whilst others penetrated this layer to found in structured chalk.

The Clay-with-flints Formation crops out on the high chalk plateaux in southern England. Changes in terminology are summarized and distinctions from adjacent similar deposits (e.g. Valley Gravel) are detailed. A threefold division of the transition zone between the two deposits is proposed based on degree of disturbance. Relationships with parent materials are discussed through structural and ...
