Spread-Spectrum Technology. Spread spectrum refers to the manner in which data signals travel through a radio frequency. With spread spectrum, data does not travel straight through a single RF band; this type of transmission is known as narrowband transmission. Spread spectrum, on the other hand, requires that data signals either alternate between carrier frequencies or constantly change their ...

Robin L. Lumsdaine. Recent retirement research has focused on factors affecting the retirement decision, reflecting the notion that retirement has become voluntary (Quinn, Burkhauser, and Myers, 1990, document the transition over the last four decades from "involuntary" retirement due to health reasons to the current situation in which most people choose to retire).
