Electrolytes are charged metallic "ions" that help balance fluid pressure inside our cells and control the pH of our blood. Normal nerve, heart and muscle function rely on adequate amounts of these

minerals, and deficiencies can hamper performance dramatically.

Our new primary insurance denies just about everything and asks for approval, review and/or prior authorization. We have needed to find a company that would provide all of Brayden's medical equipment: Feeding tube supplies and Nutrition, Ostomy, Oxygen, and Suction. This should have been happening the beginning of the year.

Last week, my staff nutritionist Laura Schoenfeld wrote a guest post for my blog called "Is a Low-Carb Diet Ruining Your Health". Perhaps not surprisingly, it has caused quite a stir. For reasons I don't fully understand, some people identify so strongly with how many carbohydrates they eat that they take offense when a suggestion is made that low-carb diets may not be appropriate for ...

7 Things Everyone Should Know About Low-Carb Diets

Water and Fluid retention in legs, also known as edema, is a medical condition caused by abnormal accumulation of water or fluids in the body's tissues. Though excess water can be accumulated anywhere in the body, the most common areas are the ankles and legs. The swelling is typically caused by large amounts of fluid accumulating in the feet, ankles, and legs (but it can also happen
