

## *Form And Function*

**Form And Function**

Form follows function is a principle associated with 20th-century modernist architecture and industrial design which says that the shape of a building or object should primarily relate to its intended function or purpose.

**Form follows function - Wikipedia**

I didn't have my sport band handy, so I had a hard time coming up with a size. After some finagling, and even ordering the wrong size originally, they worked with me to get the right size in a quick time frame.

You've likely heard the phrase "form follows function," but have you really thought about what it means or what it implies about Web design? On the surface, "form follows function" seems to make a lot of sense. The way something looks should be determined by its purpose. Is this really true? Does the phrase hold up upon deeper inspection?

**About Form And Function**

Classic design holds "form follows function" as a fundamental principle, but this is not always evident in practice. Some products are so well designed with function as their primary goal, that their use is intuitive.

The standard form of a quadratic function is given by  $f(x) = a(x - h)^2 + k$ , where  $a \neq 0$ . This form is also known as vertex form of a quadratic function. Example: -  $f(x) = 3(x-2)^2 + 7$  is in the standard form. If  $f(x) = a(x - h)^2 + k$ , is the given quadratic function, then the vertex of the function is (h, k).
