In thermodynamics, an isentropic process is an idealized thermodynamic process that is both adiabatic and reversible. The work transfers of the system are frictionless, and there is no transfer of heat or matter. Such an idealized process is useful in engineering as a model of and basis of comparison for real processes. The word "isentropic" is occasionally, though not customarily, interpreted ...

Enthalpy / ' ε n θ ə l p i / (), a property of a thermodynamic system, is equal to the system's internal

energy plus the product of its pressure and volume. In a system enclosed so as to prevent matter transfer, for processes at constant pressure, the heat absorbed or released equals the change in enthalpy.

Everything about fundamental spacecraft design revolves around the Tsiolkovsky rocket equation.. $\Delta v = V_e \cdot \ln[R]$. The variables are the velocity change required by the mission (Δv or delta-V), the propulsion system's exhaust velocity (V_e), and the spacecraft's mass ratio (R). Remember the mass ratio is the spacecraft's wet mass (mass fully loaded with propellant) divided by the dry mass ...
