**Gf Fluid Intelligence**

Fluid Intelligence ( Gf ) Our fluid intelligence (Gf) is our on-the-spot reasoning and problem solving ability, not dependent on background knowledge, education or any specific expertise. Our fluid intelligence enables us to fluidly: reason, solve problems, think abstractly - verbally, numerically or spatially, understand complex ideas,...

Definition of Fluid Intelligence (Gf) Fluid intelligence (Gf) is our reasoning and problem solving ability in new situations. It lies behind the use of deliberate and controlled mental operations to solve novel problems that cannot be performed automatically. Mental operations often include drawing inferences, concept formation, classification,...

Measurement of fluid intelligence. Within the corporate environment, fluid intelligence is a predictor of a person's capacity to work well in environments characterised by complexity, uncertainty, and ambiguity. The Cognitive Process Profile (CPP) measures a person's fluid intelligence and cognitive processes.

Abbreviated as Gf, fluid intelligence is one of the discrete factors of general intelligence, according to psychologist Charles Spearman. It is defined as the innate and inherent learning capacity of all individuals. Such acumen does not depend on one's education, learning and experience. Also known as a...

CHC theory: Fluid intelligence (Gf) Fluid Intelligence ( ) is a broad (stratum level II) ability in the Cattell-Horn-Carroll (CHC) theory of cognitive abilities. Gf refers to deliberate and controlled mental operations employed to solve novel (on the spot) problems that cannot be solved or performed automatically.

Fluid and Crystallized Intelligence in the Classroom and on the Job. A person with a nuanced understanding of language can understand and communicate complex and subtle ideas better than a person with only a rudimentary grasp of language. Each bit of knowledge can be considered a tool for solving new problems.

CHC Theory: Fluid reasoning or intelligence (Gf) definition. Induction (I). The ability to observe a phenomenon and discover the underlying principles or rules that determine its behavior. General Sequential Reasoning (RG). The ability to reason logically using known premises and principles.

Crystallized intelligence is formed through the investment of fluid intelligence when information is learned. By using fluid intelligence to reason and think about problems, the information can then be

transferred to long-term memory so that it can become part of crystallized intelligence.

**Fluid Intelligence vs. Crystallized Intelligence**

General fluid intelligence (Gf) refers to the ability to solve new problems, particularly when mentally effortful reasoning processes are required (such as inference, induction, abstraction, or synthesis). That is, Gf is involved in working out a novel solution, but not in simply remembering a previous solution.

Gf and Gc are both factors of g (general intelligence). Though distinct, there is interaction, as fluid intelligence is a determining factor in the speed with which crystallised knowledge is accumulated (Cattell, 1963).

It has recently been proposed that working memory (WM) is closely related to fluid intelligence (Gf) or general intelligence (g), and might even be the key to understanding Gf. In part for this reason, tasks assumed to assess WM have been claimed to be "among the most widely used measurement tools in cognitive psychology" (Conway et al., 2005, p. 769).

1. Introduction. General fluid intelligence (Gf) is one of the central constructs in the field of intelligence. It was introduced, along with the companion construct General crystallized intelligence (Gc) by Cattell, 1963, Cattell, 1987 to represent two different aspects of General intelligence (g). Gf is interpreted as the capacity to solve novel, complex problems, using operations such as ...
