Guillemin couplings are used for pressure and suction delivery of liquids, such as powders and granulates. LMC's guillemin couplings are symmetric couplings designed in compliance with EN 14420-8. Material. Coupling: aluminium heat treated and stainless steel AISI 316 - 1.4401.

Chapter A: Quick couplings GUILLEMIN COUPLINGS EN 14420-8 / NF E 29-572 A.2.3 A.2 Lugs A fall of a hose, assembled with Guillemin couplings, causes an import impact on the lugs of the coupling. Therefore the mechanical strength of the lugs must be tested.

Guillemin Couplings / French Couplings EN 14420-8 / NF E 29572 Guillemin coupling was also referred to Symmetrical half coupling, or French coupling. The symmetrical design ensure the same ends on both ends of the hose, and the collar prevent hose blow-off. It is widely used in France and in Belgium to couple fire hoses.

scope: This European Standard specifies dimensions, types of connections, quality of materials, marking requirements and testing requirements for hose fittings with symmetrical half couplings (Guillemin system), with mobile locking ring, for hose assemblies with a maximum working pressure of up to 10 bar) with hose tails according to EN 14420 2 and clamp units according to EN 14420 3.

On fixed installations often is chosen for a half coupling without a locking ring, seen only one locking ring is needed to tighten 2 couplings together. In some cases it is hard to couple a hose. In such a situation there can be chosen for a Guillemin coupling with a locking ring, but without the lugs. Norm: NF E 29-572, EN 14420-8
