This paper, which is a contribution to the UNEP series on Eco-Efficient Cements, examines the role of material-based solutions to reducing CO₂ emissions from cement production considering factors that could influence implementation. Global urbanization has led to an increase in demand for cement and cement-based materials.

The main conclusions of an analysis of low-CO₂, eco-efficient cement-based materials, carried out by a multi-stakeholder working group initiated by the United Nations Environment Program Sustainable Building and Climate Initiative (UNEP-SBCI) are presented, based on the white papers published in this special issue.. We believe that Portland-based cement approaches will dominate in the near ...

Concrete, usually Portland cement concrete, is a composite material composed of fine and coarse aggregate bonded together with a fluid cement (cement paste) that hardens over time—most frequently a lime-based cement binder, such as Portland cement, but sometimes with other hydraulic cements, such as a calcium aluminate cement. It is distinguished from other, non-cementitious types of concrete ...

The main types of soil treatment are: . Biological treatment. Thermal treatment / desorption (using heat to increase the volatility of contaminants so they can be removed).; Chemical immobilisation / stabilisation / solidification. Washing (injecting clean water and extracting contaminated water).; Soil vapour extraction using vacuum extraction (this is particularly effective with volatile ...

Precast concrete offers durable, flexible solutions for floors, walls and even roofs in every type of domestic construction from individual cottages to multi-storey apartments. Concrete's high initial embodied energy can be offset by its extended life cycle (up to 100 years) and high potential for reuse and relocation.

An earth shelter is a structure (usually a house) with earth against the walls, on the roof, or that is entirely buried underground.. Earth acts as thermal mass, making it easier to maintain a steady indoor air temperature and therefore reduces energy costs for heating or cooling.. Earth sheltering became relatively popular after the mid 1970s, especially among environmentalists.
