HVAC (Heating, Ventilation and Air Conditioning) equipment needs a control system to regulate the operation of a heating and/or air conditioning system. Usually a sensing device is used to compare the actual state (e.g. temperature) with a target state. Then the control system draws a conclusion what action has to be taken (e.g. start the blower).

The enormous development in designing the BESS controls can be attributed to a large extent to the rapid growth in power electronic devices. The BESS controls designed for direct power system applications either consider interconnected system , , , , , or isolated systems or hybrid systems , . Recently, a few investigations have also been carried out to examine the operation and controls of

Control theory in control systems engineering is a subfield of mathematics that deals with the control of continuously operating dynamical systems in engineered processes and machines. The objective is to develop a control model for controlling such systems using a control action in an optimum manner without delay or overshoot and ensuring control stability.

NFPA 70®: National Electrical Code® (NEC®) is the basis for electrical safety that has saved countless lives. Adopted in all 50 states, the NEC helps protect people and property from electrical hazards involving wiring and equipment. Comprehensive provisions address electrical installations in virtually all buildings -- including commercial, residential, and industrial occupancies.
