### NCA MASTER CONSTRUCTION SPECIFICATIONS - Office of ...

Ducts are conduits or passages used in heating, ventilation, and air conditioning (HVAC) to deliver and remove air. The needed airflows include, for example, supply air, return air, and exhaust air. Ducts commonly also deliver ventilation air as part of the supply air. As such, air ducts are one method of ensuring acceptable indoor air quality as well as thermal comfort.

### Duct (flow) - Wikipedia

Air Flow Hood is a portable test equipment instrument that indicates volumetric air flow through grills, diffusers and registers. Applications include commissioning, testing, adjusting, and balancing volumetric air flow from diffusers, grilles, and registers in HVAC systems.

### Product Categories | Dwyer Instruments

Testing, balancing and adjusting the HVAC are other essential roles of facility managers. This work should be handled by certified contractors after a major construction project, but in-house staff can do the work after minor projects. Chapter 10 includes a guide for basic procedures in this regard.

### Hospital mechanical and electrical systems | HFM

Each HVAC system must meet the current requirements and in particular, DIN EN 12599, which means that the equipment should pass a series of tests before full commissioning and regular operation. The methods applied as well as the measuring instruments used for the testing purpose must all meet the requirements and be approved.
