This energy stays with the gas, so it must show up as increased internal energy, so the temperature must rise. Get a bicycle tyre pump, hold your finger over the outlet and squeeze it hard and fast with your other hand: you'll find you can warm the air up inside it quite considerably (put your lips gently on the cylinder wall to sense the rising ...

What happens to the temperature when an ideal gas is ...

An ideal gas follows the ideal gas law at all conditions of P and T. The particles in an ideal gas do not have finite size and volume. The collisions between the ideal gas particles are said to be elastic, they exert no attractive or repulsive forces. Hydrogen gas generated in today's experiment is, however, a real gas not an ideal gas.

a) Consider an ideal gas of particles in the earth's gravitational field, where each gas molecule has mass m and g is the acceleration due to gravity. The dependence of the pressure $p(z)$ on the height z is determined by the condition for mechanical equilibrium: for the gas contained in a small region, the downward gravitational force

Chemistry questions and answers; 2) The average molecular weight of a sample of a gas, $(MW)_{ave}$, can be found from the mass and number of moles, using the relationship $(MW)_{ave} = \frac{m}{n}$ (2.1) where m is the mass of the gas and n is the number of moles of the gas. The following results are found experimentally.
