Kirchhoff's Current Law (KCL): According to KCL, at any moment, the algebraic sum of flowing currents through a point (or junction) in a network is Zero (0) or in any electrical network, the algebraic sum of the currents meeting at a point (or junction) is Zero (0). This law is also known as Point Law or Current law.

Example : Two cells having emf of 10 V and 8V, and internal resistance of 1 Ω (each) are connected as shown with an external resistance of 8 Ω . Find the current flowing through the circuit. Solution : Suppose that a current i flows through the external resistance (8 Ω) and it divides into two branches at the node B as i_1 and i_2 Using KCL , $i_1 + i_2 = i \dots$
