The energy policy of India is largely defined by the country's expanding energy deficit and increased focus on developing alternative sources of energy, particularly nuclear, solar and wind energy. India attained 63% overall energy self-sufficiency in 2017. The primary energy consumption in India grew by 2.3% in 2019 and is the third biggest after China and USA with 5.8% global share.

### Energy policy of India - Wikipedia

Current and anticipated legislation throughout most of the developed world suggests that a

reduction in the amount of CO<sub>2</sub> that industry will be allowed to emit in the future is inevitable. Meanwhile, the world's energy demand is expected to increase by nearly 50% by 2030, and fossil fuels such as Natural Gas are likely to be a significant portion of the world's energy mix for many years ...
