The Luria-Delbrück experiment (1943) (also called the Fluctuation Test) demonstrates that in bacteria, genetic mutations arise in the absence of selection, rather than being a response to selection. Therefore, Darwin's theory of natural selection acting on random mutations applies to bacteria as well as to more complex organisms. Max Delbrück and Salvador Luria won the 1969 Nobel Prize in ...

The reconstruction is based on a CT scan of Gage's real skull, not a model of it made by deforming the model of another skull. From it they believe the skull hinged open as the tamping iron passed through it and that once it was completely through, the muscles and other soft tissues of the face caused the skull to close.
