Mastering Biology Chapter 6 Flashcards | Quizlet

The lac operon of the model bacterium Escherichia coli was the first operon to be discovered and provides a typical example of operon function. It consists of three adjacent structural genes, a promoter, a terminator, and an operator. The lac operon is regulated by several factors including the availability of glucose and lactose. It can be activated by allolactose.

Developmental biology is the study of the process by which animals and plants grow and develop. Developmental biology also encompasses the biology of regeneration, asexual reproduction, metamorphosis, and the growth and differentiation of stem cells in the adult organism.

Developmental biology - Wikipedia

3. The Interaction of Biology and Environment. Among the most compelling stories emerging in the early 21st century from the science of child development have been the extraordinary developmental processes by which a microscopic assembly of embryonic neural cells gives rise to the human brain—the most complex physical object in the known universe (Fox et al., 2010; IOM and NRC, 2009 ...

3 The Interaction of Biology and Environment ...

The spirochete *Borrelia burgdorferi* is a tick-borne obligate parasite whose normal reservoir is a variety of small mammals [1]. Whereas infection of these natural hosts does not lead to disease, infection of humans can result in Lyme disease, as a consequence of the human immunopathological response to *B. burgdorferi* [2, 3]. Consistent with the pathogenesis of Lyme disease, bacterial products ...

Biology of Infection with *Borrelia burgdorferi*

Tobacco addiction remains a substantial problem in the United States and worldwide. Of those individuals who have ever tried smoking, about one-third become daily smokers (USDHHS 1994, p. 67). Of those smokers who try to quit, less than 5 percent are successful at any one time (Centers for Disease Control and Prevention [CDC] 2002, 2004). Although not all smokers become nicotine dependent, the ...
