

Molecular Markers In Plant Conservation Genetics

Molecular Markers In Plant Conservation

ABSTRACT With the development of molecular marker technology in the 1980s, the fate of plant breeding has changed. Different types of molecular markers have been developed and advancement in sequencing technologies has geared crop improvement. To explore the knowledge about molecular markers, several reviews have been published in the last three decades; however, all these reviews were meant ...

About The Plant List. The Plant List is a working list of all known plant species. Version 1.1, released in September 2013, aims to be comprehensive for species of Vascular plant (flowering plants, conifers, ferns and their allies) and of Bryophytes (mosses and liverworts). It does not include algae or fungi.

About — The Plant List

Notopterygium incisum C. C. Ting ex H. T. Chang (Apiaceae) is an endangered perennial herb in China. The lack of transcriptomic and genomic resources for *N. incisum* greatly hinders studies of its population genetics and conservation. In this study, we employed RNA-seq technology to characterize transcriptomes for the flowers, leaves, and stems of this endangered herb.

Transcriptome analysis of the endangered Notopterygium ...

The Center for Plant Cell Biology addresses significant questions in plant biology on a molecular level to meet such global challenges as improved nutrition, increased crop yield, resistance to

pests, sustainable biofuels, and environmental conservation.

Plant Tissue Culture. Plant tissue culture is defined as culturing plant seeds, organs, explants, tissues, cells, or protoplasts on a chemically defined synthetic nutrient media under sterile and controlled conditions of light, temperature, and humidity.

Plant Tissue Culture - an overview | ScienceDirect Topics

In evolutionary biology, conserved sequences are identical or similar sequences in nucleic acids (DNA and RNA) or proteins across species (orthologous sequences), or within a genome (paralogous sequences), or between donor and receptor taxa (xenologous sequences). Conservation indicates that a sequence has been maintained by natural selection.. A highly conserved sequence is one that has ...

Conserved sequence - Wikipedia

DNA barcoding is a taxonomic method that uses a designated portion of a specific gene or genes (proposed to be analogous to a barcode) to identify an organism to species. These "barcodes" are sometimes used in an effort to identify unknown species, parts of an organism, or simply to catalog as many extant taxa as possible.

DNA barcoding - Wikipedia

Society for Molecular Biology & Evolution. Juliette de Meaux is interested in the molecular basis of Darwinian adaptation in natural plant systems. Her works combines the approaches of population, quantitative and molecular genetics to dissect the underpinning of adaptive changes.
