**Noise Control A Primer**

Noise, in analog video and television, is a random dot pixel pattern of static displayed when no transmission signal is obtained by the antenna receiver of television sets and other display devices. The random pattern superimposed on the picture, visible as a random flicker of "dots" or "snow", is the result of electronic noise and radiated electromagnetic noise accidentally picked up by the ...

A compass is a navigational instrument that is used to determine direction relative to the surface of the earth. Compasses measure direction with respect to the 4 cardinal directions (North, East, South, West) with 0 degrees indicating straight North and 180 degrees indicating straight South.

An Electronic Speed Control Primer. September 30, 1997 for Sailplane & Electric Modeler Magazine. Electric flight is really taking off. Part of the reason is the ready availability of high quality electronic speed controls for nearly any desired application.

To understand how noise standards and regulations affect the ability of manufacturers to compete in national and international markets, it is important to distinguish between noise emission and noise immission.. Standards for noise emission—the sound emitted by a product independent of its location—allow a manufacturer to make a measurement of a specific piece of equipment under specified ...

In information theory and telecommunication engineering, the signal-to-interference-plus-noise ratio (SINR) (also known as the signal-to-noise-plus-interference ratio (SNIR)) is a quantity used to give theoretical upper bounds on channel capacity (or the rate of information transfer) in wireless communication systems such as networks. Analogous to the SNR used often in wired communications ...

9 Steel used in metal fabrication is often coated with a primer to minimise corrosion. During oxy-fuel gas cutting the heat generated can cause the primer to thermally degrade resulting in the release of a wide range of pollutants.

Equalization is all too often misused to compensate for poor level settings. If you find you want your settings to be more than 6 dB boost, investigate and see if a readjustment of levels could help, reducing the amount of boost at the equalizer.

DIMMERS. A number of types of dimmers have been used in theatre, but today almost all dimmers are electronic dimmers. The vast majority are Silicon Control Rectifiers, or SCRs. Electronic dimmers work by chopping off a portion of the AC sine wave.
