Cirrhosis is defined histologically as a diffuse hepatic process characterized by fibrosis and the conversion of normal liver architecture into structurally abnormal nodules. The progression of liver injury to cirrhosis may occur over weeks to years.

Cirrhosis: Practice Essentials, Overview, Etiology

Let's take a trip to the sea to look at some interesting creatures called cnidarians and ctenophores. Though the names may not be familiar, the animals should be, as these are things like ...

Cnidaria & Ctenophora: Habitat, Morphology & Regeneration ...

Starfish or sea stars are star-shaped echinoderms belonging to the class Asteroidea. Common usage frequently finds these names being also applied to ophiuroids, which are correctly referred to as brittle stars or basket stars. About 1,500 species of starfish occur on the seabed in all the world's oceans, from the tropics to frigid polar waters.

Starfish - Wikipedia

Sodium is a chemical element with symbol Na (from Latin natrium) and atomic number 11. It is a soft, silvery-white, highly reactive metal. Sodium is an alkali metal, being in group 1 of the periodic table, because it has a single electron in its outer shell, which it readily donates, creating a positively charged ion—the Na⁺ cation. Its only stable isotope is ²³Na.

Sodium - Wikipedia

The sum of all the chemical reactions occurring within a cell or organism. * Reactions responsible for building up larger molecules are anabolic and include the synthesis of organic polymers from monomers. Reactions responsible for breaking down larger molecules are catabolic and include the digestion of organic polymers (food like carbohydrates and proteins) into their monomer subunits.
