In a new policy published in the April 2011 issue of Pediatrics (published online March 21), the AAP advises parents to keep their toddlers in rear-facing car seats until age 2, or until they reach the maximum height and weight for their seat. It also advises that most children will need to ride in a belt-positioning booster seat until they have reached 4 feet 9 inches tall and are between 8 ...

AAP Updates Recommendation on Car Seats

The American Academy of Pediatrics (AAP) is an American professional association of pediatricians, headquartered in Itasca, Illinois. It maintains its Department of Federal Affairs office in Washington, D.C.

Cardiac arrest is a sudden loss of blood flow resulting from the failure of the heart to effectively pump. Symptoms include loss of consciousness and abnormal or absent breathing. Some individuals may experience chest pain, shortness of breath, or nausea before cardiac arrest. If not treated within minutes, it typically leads to death.. The most common cause of cardiac arrest is coronary ...

Cardiac arrest - Wikipedia

The problem with deciding on an appropriate dose of push dose epinephrine for pediatric patients is that a pediatric push dose of a vasopressor should be weight based. Giving a standard dose of 1-2 cc (10-20 mcg) of epinephrine will be a highly variable dose per kg depending on the weight of the patient.
