

Perl Documentation Tutorial

Perl Documentation Tutorial

Perl is a programming language developed by Larry Wall, especially designed for text processing. It stands for Practical Extraction and Report Language. It runs on a variety of platforms, such as Windows, Mac OS, and the various versions of UNIX. This tutorial provides a complete understanding on ...

Perl Tutorial

Module Docs. Perl modules come with their own documentation. This includes modules installed from CPAN. On Unix-like (including Linux and Mac OS X) systems, you can access the documentation (for installed modules) with the perldoc command. For example, to get the documentation for IO::File, enter perldoc IO::File from your command prompt. Module documentation is also available on metacpan.org

One should note that in order to get help with Perl code, you should first make a minimal effort to learn it. Perl is a relatively easy language to learn, and most programmers can easily get the hang of it, and become productive with it.

Resources for Learning Perl

Finding Regex Matches in String Vectors. The grep function takes your regex as the first argument, and the input vector as the second argument. If you pass value=FALSE or omit the value parameter then grep returns a new vector with the indexes of the elements in the input vector that could be (partially) matched by the regular expression. If you pass value=TRUE, then grep returns a vector with ...
