Since the publication of the first edition, practical surface analysis has grown and diversified to such an extent that the editors have found it necessary to produce a new companion volume to cover the fields of ion and neutral spectroscopy. This first volume of the two-volume set discusses two closely related analytical techniques--Auger and X-ray photoelectron spectroscopy.

Auger electron spectroscopy (AES; pronounced in French) is a common analytical technique used specifically in the study of surfaces and, more generally, in the area of materials science. Underlying the spectroscopic technique is the Auger effect, as it has come to be called, which is based on the analysis of energetic electrons emitted from an excited atom after a series of internal relaxation ...
