

Process Measurement And Analysis Liptak

Process Measurement And Analysis Liptak

An ultrasonic flow meter is a type of flow meter that measures the velocity of a fluid with ultrasound to calculate volume flow. Using ultrasonic transducers, the flow meter can measure the average velocity along the path of an emitted beam of ultrasound, by averaging the difference in measured transit time between the pulses of ultrasound propagating into and against the direction of the flow ...

Ultrasonic flow meter - Wikipedia

Flow measurement is the quantification of bulk fluid movement. Flow can be measured in a variety of ways. The common types of flowmeters that find industrial application can be listed as below:

Typical rotameter types widely used in the process industries include two low-capacity meters often used as purge meters (A). (Note the optional scale lengths); higher capacity, "standard" meters (B), shown here with female threaded connections (left) and screw-on pipe flanges (right); metal tube or armored rotameters for higher flow capacities (C) and for low flows including purging (D).
