## **Railway Electric Power Feeding Systems**

There is a wide variety of electric traction systems around the world and these have been built according to the type of railway, its location and the technology available at the time of the installation.

### **Electric Traction Power | The Railway Technical Website ...**

Three-phase electric power is a common method of alternating current electric power generation, transmission, and distribution. It is a type of polyphase system and is the most common method used by electrical grids worldwide to transfer power. It is also used to power large motors and other heavy loads.. A three-wire three-phase circuit is usually more economical than an equivalent two-wire ...

Rolling stock in a rail transport system generally encounters lower frictional resistance than road vehicles, so passenger and freight cars (carriages and wagons) can be coupled into longer trains. The operation is carried out by a railway company, providing transport between train stations or freight customer facilities. Power is provided by locomotives which either draw electric power from a ...

Electric motors are a common means of powering a train, whether the energy required is carried on-board the train in the form of a diesel engine and its fuel or obtained from outside the train by connection with an external power supply carried by an overhead line or third rail.

### **Electric Traction Control | The Railway Technical Website ...**

Electric stock may recuperate energy during braking by using traction motors as generators. In DC supply systems (1,5 and 3 kV) high recovery rates are only achievable under favourable conditions.
